COMUS

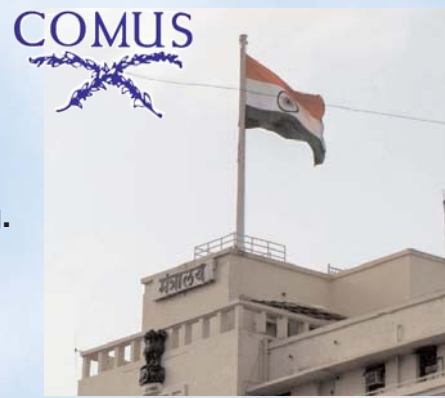

International  India

What can India do for you?

# Introduction

Our Comus India facility, based in Chennai in South-East India, can offer many different ranges of products and services. Our purpose built facility is fully equipped for high volume production, which enables us to offer competitive pricing. Not only do we have many years of reed switch manufacturing experience, but there are a vast range of other products and services that we can offer, which we would like to draw your attention to.....

## Reed Switches

Normally Open, and Change-over reed switches available. Sub-miniature, miniature, compact, standard, compact, and high voltage versions. Surface Mount, and moulded versions, as well as customization of all switch types.

## Proximity Switches

Rectangular, Cylindrical and Threaded versions, in both plastic and metal. Do you want a longer cable? Connectors added? Maybe even a custom designed housing? Not a problem.....all customer requirements are catered for. Our emphasis for India is high volume enquiries, whilst our sister company, Assemtech, in the UK will continue to produce smaller quantities, and specials with fast turn around.

## Float Switches

Plastic and Stainless Steel versions, horizontal or vertical. High voltage and variable tube lengths are also possible. If you have a float or level sensing problem, and we dont have an off the shelf solution, we can easily create a solution for you.

## Injection Moulding

We are now able to offer the ability to supply low cost, quality injection moulded parts for your own manufacture, or for your projects. Our expertise also enables us to produce small insert moulded components, as well as surface mount devices. Whatever your enquiry, all materials are available, just send us your enquiry, and we will be happy to quote you. Try us for your tooling requirements, and be amazed at how much we can save you not only with tooling costs, but in piece part prices also.

## Printing

We have a team of dedicated print experts using the latest technology and modern printing techniques producing high quality printed material such as flyers, brochures, and catalogues.....let us quote for your requirements, and see how much you can save. Shipping by sea means carriage costs are of little significance.

## Printed Circuit Boards

Large or small volume, single, double sided, and multilayered P.C.B's manufactured to your specifications. Provide us with your design, or alternatively we can assist you through to the finished product.

## Sub-Contract Manufacture

Do you have a large order that you cannot cope with because of lack of time, untrained or unavailable staff? Or have you considered outsourcing your assembly requirements in the past but found it too expensive? Give us a try, you will be amazed at how much we can reduce your costs.
